

CareerGhana Python Internship — Task 2

Deliverable: ATS Resume Keyword Checker & Gap Analyzer Report
Repository: https://github.com/J-git22/careerghana_tasks/tree/main/task_2_resume_checker

1. Project Overview & Objective

Modern recruitment workflows rely heavily on Applicant Tracking Systems (ATS) to filter and rank candidates before human review. This tool implements an automated ATS keyword scanner that evaluates candidate resumes against targeted job descriptions to identify exact keyword matches, calculate match percentages, and spotlight critical skill gaps.

2. Analysis Results & Compatibility Summary

Metric / Indicator	Result Value	Assessment
Resume Evaluated	sample_resume.txt	Developer intern candidate profile
Target Keywords File	sample_job_keywords.txt	20 benchmark skills & technologies
Keywords Found	13 of 20 (65.0%)	Strong alignment on core competencies
Keywords Missing	7 of 20 (35.0%)	Targeted areas for resume enhancement
Compatibility Rating	GOOD MATCH	Meets majority of core technical requirements

3. Keyword Distribution & Gap Analysis

Found Keywords (with occurrence counts): Python (6x), Docker (4x), Flask (4x), GitHub (4x), Agile (3x), PostgreSQL (3x), FastAPI (2x), Git (2x), REST APIs (2x), SQLite (2x), Linux (1x), TDD (1x), Unit Testing (1x).

Identified Skill Gaps: AWS, CI/CD, Django, GraphQL, Kubernetes, MongoDB, Redis.

4. ATS Report Output Sample

```
=====
RESUME KEYWORD CHECKER REPORT
=====
Total Keywords Analyzed: 20 | Found: 13 (65.0%) | Missing: 7 (35.0%)
Compatibility Rating: GOOD MATCH (Meets most core qualifications)
-----
[+] FOUND (13): Python (6), Docker (4), Flask (4), GitHub (4), ...
[-] MISSING (7): AWS, CI/CD, Django, GraphQL, Kubernetes, MongoDB, Redis
=====
```

5. Actionable Advice & Optimization

Candidates are advised to explicitly showcase experience with missing technologies (e.g. AWS deployment, CI/CD pipelines, or container orchestration) in project bullet points to maximize their automated ATS score and interview callback rates.
